Wall fountains usually have interlocking parts, but are still capable of falling over if pushed. Wall fountains must have a solid wall support.

We do not recommend cementing or glueing fountain components together, as it will make it too difficult to dismantle, access pump, or move to another location.

Do not attempt to operate pump without a proper ground. Read pump instruction and warranty carefully before installing.

One-year fountain warranty does not cover improper fountain installation by fountain owner.

For information or questions regarding your fountain, please contact a sales representative at 415.239.5990 or e-mail us at info@asilvestri.com.

CAUTION: DO NOT PLACE EXCESSIVE WEIGHT ON YOUR FOUNTAIN. KEEP OTHERS FROM CLIMBING, SITTING, OR LEANING ON FOUNTAIN.

Wall Fountain Set-Up

With Wall Basin:
1. Before setting up your fountain, make sure there is a level foundation (see cement pad instruction sheet).
2. Place the wall basin on the prepared foundation, and make sure it is level.
3. Place the pump in the wall basin, pulling the cord out the back of the fountain and toward the direction of the outlet. Position the pump with the tubing connection facing upward.
4. Place a rubber grommet around the pump cord, with the smaller end facing the back of the fountain. Firmly push the rubber grommet through the hole in the back of the wall basin, creating a water tight seal.
5. If there is a hole for drainage, plug it with a drain plug.
6. Slip one end of the plastic tubing over the tubing connection on the pump.
7. Connect tubing from the pump to the fountain’s intake pipe (usually small pipe next to grommet hole on back wall of fountain or on back side of top component). Use a restrictor clamp to tighten tubing around the pipe.
8. Carefully place the top component of the fountain onto the wall basin. These two parts should interlock. Use putty and shims to level wherever needed.
9. Fill your fountain with water, and plug the pump into a nearby 110V outlet.

Without wall basin:
1. Place the pedestal on a level foundation (see cement pad instruction sheet).
2. Follow previous steps 2 through 9.

Free Standing Fountain Set-Up

With pond:
1. Before setting up your fountain, make sure there is a level foundation (see cement pad instruction sheet).
2. Tilt the pond on its side on a padded surface to protect it from any scratches or chips.
3. Feed pump cord down through center of pond, leaving approximately 6” of slack for positioning the pump inside the pond.
4. Slip the rubber grommet, smaller end facing down, over the pump cord. Push the grommet down firmly into the pond center, creating a water tight seal.
5. Insert the drain plug into the drain hole on the side of the pond.
6. Carefully lay the pond down on its prepared foundation, while pulling the pump cord to the side of the pond.
7. Position the pump in the center of the pond with the tubing connection facing upward.
8. Place the pump house over the pump and position in center of pond.
9. Slip one end of the plastic tubing over the tubing connection.
10. Feed the tubing through each fountain component, taking time to center and level with shims. Wrap putty around the plastic tubing to fill any gaps between the tubing and the fountain component.
11. Run the tubing up to 2” below the top of the finial.
12. Fill your fountain with water and plug pump into a nearby 110V outlet.

Without pond:
1. Place the pedestal on a level foundation (see cement pad instruction sheet).
2. Follow previous steps 2 through 4.
3. Pull pump cord down through pedestal and pull out the bottom and out to the side.
4. Place bowl on pedestal and level with shims.
5. Follow previous steps 7 through 12.
